

FHIR Task

DOHA KORANY ABDALLAHKHALIL

Healthcare data may be transferred between various computer systems, independent of how it is kept in those systems, according to the HL7 FHIR standard. It permits the availability of clinical and administrative data as well as healthcare information. securely to individuals who are entitled to access it and who do so in order to benefit from a patient receiving care. FHIR is developed and upgraded collaboratively by the standards development organisation HL7 (Health Level Seven3).

There are some Screenshots from the task:
